Rocket.Chat

Secure collaboration for defence and the public sector. Interoperable by design. Governed by you.

ABOUT US

Rocket.Chat is a communications platform that brings messaging, voice, video, file sharing and AI together in one workspace. Organisations can run it on their own infrastructure, on-premises or fully air-gapped, or in a sovereign cloud. Either way, they keep full control of their data, access and compliance. The platform is open source, so its code can be independently audited.

Public sector and defence organisations, critical infrastructure operators and system integrators in Europe, North America and NATO use Rocket.Chat.

PLATFORM

Unified communications	Messaging, voice, video and files in one workspace
Data sovereignty	On-premises, secure/sovereign cloud or air-gapped; no dependency on third-party clouds
Interoperability	Native Matrix and XMPP federation; bridges to Microsoft Teams and IRC
Governance and security	Attribute-based access control, message auditing, granular retention, post-quantum encrypted conversations
Governed AI	Summarise, translate and retrieve with AI models running inside your own environment, scoped to each user's permissions
Tactical edge	Operates in disconnected and low-bandwidth environments; TAK/ATAK integration

TYPICAL USE CASES

Sovereign collaboration · Out-of-band and crisis communications · Emergency preparedness · Mission partner collaboration · Replacement for Skype for Business Server

COMPLIANCE AND CERTIFICATIONS

ISO/IEC 27001 · SOC (AICPA) · Platform One and Tradewinds Awardable · Matrix Foundation member

SELECTED CUSTOMERS

NATO CCDCOE (Tallinn, Estonia)	NATO Cooperative Cyber Defence Centre of Excellence. Uses Rocket.Chat on-premises as its main platform for exercises.
eu-LISA (EU)	EU Agency for the operational management of large-scale IT systems. Uses Rocket.Chat for real-time collaboration across testing campaigns throughout Europe.
Elsäkerhetsverket (Sweden)	Swedish National Electrical Safety Board. Uses Rocket.Chat for secure messaging, calls and file sharing.
