xyzt.ai

The Movement Intelligence Layer

Turning movement data into operational intelligence.

xyzt.ai enables defense and security organizations to analyze large volumes of movement data, reveal behavior and patterns, and derive actionable intelligence for mission operations.

- Analyze billions of movement events
- Combine multi-source data
- Detect patterns and anomalous behavior
- Investigate historical activity and trends

Relevant defense applications

- Maritime domain awareness
- Surveillance and monitoring
- Behavior analysis and investigations
- Protection of critical infrastructure
- Support for multi-domain operations

Built for integration

- Complementary to your existing systems (C2, COP, ISR, MDA)
- On-premises and sovereign deployment
- Open APIs for seamless integration
- Works with your data and infrastructure
- Flexible licensing and partner enablement (e.g. white label)

We are looking to connect with defense system integrators, technology partners and government organizations seeking to strengthen their operational intelligence capabilities.
